

HIGH PRESSURE SEAL

5 ABSTRACT OF THE DISCLOSURE

10 A sealing assembly for sealing a cavity. The sealing  
assembly includes a sleeve and a molded skirt. A cable is  
threaded through the sleeve and the cable and sealing assembly  
are inserted into the cavity. The sealing assembly skirt has a  
15 sealing surface that has the same shape as the interior surface  
of the cavity. This reduces the likelihood of the skirt  
wrinkling and creating leak paths when it is in sealing contact  
with the interior surface of the cavity. One preferred embodiment  
of the sealing assembly can be used to seal an electrical  
connector.
